

MEET WINGS

The background of the slide features a light blue sky with numerous monarch butterflies in various stages of flight. Some butterflies are large and prominent, while others are smaller and scattered throughout the scene. The butterflies have their characteristic orange and black wings.

Wings is based on the scientific theory called the “butterfly effect.” Scientists say that when a butterfly flaps her wings, small changes occur in the air around the butterfly that lead to other changes in the air. These in time become part of something much bigger, such as a hurricane. This is the butterfly effect.

**/ uses her wings to let kindness
grow**

Wings wants  kids to think of something kind to do or say every day.

Pretty soon, everyone who experiences that act of kindness will do or say something kind to someone else.

**Before you know it, WINGS has the
Butterfly Effect!**

Stepping out of the way for someone to pass you in the hall.

Offer help to someone.

Stand up for people being bullied or teased.

Show interest when someone is talking.

Work hard and follow teacher directions.

TOOLS to USE

Brainstorm a list of ways to be kind to others.

Fill Your Bucket

Spread at least one act of kindness everyday.

Respond positively to acts of kindness.

Encourage others to spread kindness.

spread kindness

Remember to keep unkind thoughts and actions to yourself

Give a Franklin wave in the hall.

CRANIUM COACH reminds you to use positive
self talk.

“I am doing and say things to make other people feel like a “1.” It makes me feel like a “1” when I spread my wings because I am making the world a better place.”

Use your WING POWER
everyday!
